Competing for Global Talent International Labour Office, 2006 Global talent has never been more mobile or sought after. A complex phenomenon that takes many forms, the movement of people with skills includes migrants crossing borders for temporary stays abroad as well as settlement, students moving for degrees and temporary and permanent stays, and even tourists and refugees who decide to stay abroad and use their skills. Countries attracting global talent increase their stock of human and technological skills, and in the past decade many have welcomed foreign professionals and students to redress domestic skill shortages and to quicken economic growth. This book includes general and theoretical papers on skilled migration and also papers on the country experiences of Australia, India, Japan, Singapore, the United Kingdom, and the United States. It addresses the socio-economic and cultural challenges created by increased mobility in a world where globalizing and localizing forces are at work simultaneously

Sustainable Protein Production and Consumption: Pigs or Peas? Harry Aiking, Joop de Boer, Johan Vereijken, 2006-02-23 Sustainable Protein Production and Consumption: Pigs or Peas? is a book that presents and explores the PROFETAS programme for development of a more sustainable food system by studying the feasibility of substituting meat with plant based alternatives. The emphasis is on improving the food system by reducing the use of energy, land, and freshwater, at the same time limiting the impacts on health and animal welfare associated with intensive livestock production. It is clear that such a new perspective calls not only for advanced environmental and technological research, but also for in-depth societal research, as the acceptance of new food systems is critically contingent on perceptions and attitudes of modern consumers. In this unique multidisciplinary setting, PROFETAS has opened up pathways for a major transition in protein food production and consumption, not by just analyzing the food chain, but rather by exploring the entire agricultural system, including biomass for energy production and the use of increasingly scarce

freshwater resources. The study presented here is intended to benefit every stakeholder in the food chain from policymakers to consumers, and it offers guiding principles for a transition towards an ecologically and socially sustainable food system from a multi-level perspective.

Contribution of the Forestry Sector to National Economies, 1990-2011 Arvydas Lebedys, Yanshu Li, 2014 This paper demonstrates the contribution of the forestry sector to national economies at the global, regional and country levels. It presents the status and trends of the forestry sector's contribution (total employment, value-added and export earnings) and analyses the driving forces behind these trends. The study gives a reasonable estimation of the general trends in the sector at the regional and global level, with some estimations at the level of individual countries. This is the second update of FAO's original report on the topic.

Archives and Human Rights Jens Boel, Perrine Canavaggio, Antonio González Quintana, 2021-02-09 Why and how can records serve as evidence of human rights violations, in particular crimes against humanity, and help the fight against impunity? Archives and Human Rights shows the close relationship between archives and human rights and discusses the emergence, at the international level, of the principles of the right to truth, justice and reparation. Through a historical overview and topical case studies from different regions of the world the book discusses how records can concretely support these principles. The current examples also demonstrate how the perception of the role of the archivist has undergone a metamorphosis in recent decades, towards the idea that archivists can and must play an active role in defending basic human rights, first and foremost by enabling access to documentation on human rights violations. Confronting painful memories of the past is a way to make the ghosts disappear and begin building a brighter, more serene future. The establishment of international justice mechanisms and the creation of truth commissions are important elements of this process. The healing begins with the acknowledgment that painful chapters are essential parts of history; archives then play a crucial role by providing evidence. This book is both a tool and an inspiration to use archives in defence of human rights. Sulfur Chemistry Xuefeng Jiang, 2019-08-28 The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field.

Urbanism and Dictatorship Harald Bodenschatz, Piero Sassi, Max Welch Guerra, 2015-03-10 In the first half of the twentieth century, urban design under the influence of European dictatorships not only served to support the rulers in their own country, but also to gain the recognition of the democratic states. After the National Socialist regime came to power in Germany, urban design increasingly became the trump card in the competition amongst the large dictatorships in Europe - almost as in the time of absolutism. Irrespective of all conflicts and political orientations, there was an intense exchange of ideas amongst the states in Europe. It is therefore not adequate to make an assessment just from the point of view of the dictatorships. The overarching view helps to understand the special characteristics of each dictatorship and also disproves some simplified interpretations of their respective approaches to urban design. That is not just of historic interest; the discussion of the issue of dictatorships is always also an expression of our social condition, our commemorative culture, our ability to recognize old and new forms of dictatorship - even today! The book discusses the state of research into urban design under five dictatorships during the first half of the twentieth century, and presents new research results based on examples.

Recent Approaches in Omics for Plant Resilience to Climate Change Shabir Hussain Wani, 2019 This edited volume summarizes the recent advancements made in plant science including molecular biology and genome editing, particularly in the development of novel pathways tolerant to climate change-induced stresses such as drought, extreme temperatures, cold, salinity, flooding, etc. These stresses are liable for decrease in yields in many crop plants at global level. Till date conventional plant breeding approaches have resulted in significant improvement of crop plants for producing higher yields during adverse climatic conditions. However, the pace of improvement through conventional plant breeding needs to be accelerated in keeping with the growing demand of food and increasing human population, particularly in developing world. This book serves as a comprehensive reference material for researchers, teachers, and students involved in climate change-related abiotic stress tolerance studies in plants.
