**Shale Oil and Shale Gas Resources** José A. Torres, Hector Klie, 2020-05-23 This multidisciplinary book covers a wide range of topics addressing critical challenges for advancing the understanding and management of shale oil and shale gas resources. Both fundamental and practical issues are considered. By covering a variety of technical topics, we aim to contribute to building a more integrated perspective to meet major challenges faced by shale resources. Combining complementary techniques and examining multiple sources of data serve to advance our current knowledge about these unconventional reservoirs. The book is a result of interdisciplinary and collaborative work. The content includes contributions authored by active scientists with ample expertise in their fields. Each article was carefully peer-reviewed by researchers, and the editorial process was performed by an experienced team of Senior Editors, Guest Editors, Topic Editors, and Editorial Board Members. The first part is devoted to fundamental topics, mostly investigated on the laboratory scale. The second part elaborates on larger scales (at near-wellbore and field scales). Finally, two related technologies, which could be relevant for shale plays applications, are presented. With this Special Issue, we provide a channel for sharing information and lessons learned collected from different plays and from different disciplines.

**Пропаганда 2.0** Георгий Почепцов, 2020-04-04 Пропаганда присутствует в любом обществе и во все времена. Она может быть политической, а может продвигать здоровый образ жизни, правильное питание или моду. В разные исторические периоды пропаганда приходит вместе с религией или идеологией. Чаще всего мы сталкиваемся с политической пропагандой, например, внутри СССР или во времена «холодной войны», когда пропаганда становится основным оружием. Информационные войны, о которых сегодня заговорил весь мир, также используют инструментарий пропаганды. Она присутствует и в избирательных технологиях, то есть всюду, где большие массы людей подвергаются влиянию. Информационные операции, психологические, операции влияния — все это входит в арсенал действий современных государств, организующих собственную атаку или защиту от чужой атаки. Об этом и многом другом рассказывается в нашей книге, которая предназначена для студентов и преподавателей гуманитарных дисциплин, также ее можно использовать при обучении медиаграмотности в средней школе.

**CLOUD AND INTERNET SECURITY** Binh Nguyen, A while back I wrote two documents called 'Building a Cloud Service' and the 'Convergence Report'. They basically documented my past experiences and detailed some of the issues that a cloud company may face as it is being built and run. Based on what had transpired since, a lot of the concepts mentioned in that particular document are becoming widely adopted and/or are trending towards them. This is a continuation of that particular document and will attempt to analyse the issues that are faced as we move towards the cloud especially with regards to security. Once again, we will use past experience, research, as well as current events trends in order to write this particular report. Personal experience indicates that keeping track of everything and updating large scale documents is difficult and depending on the system you use extremely cumbersome. The other thing readers have to realise is that a lot of the time even if the writer wants to write the most detailed book ever written it's quite simply not possible. Several of my past works (something such as this particular document takes a few weeks to a few months to write depending on how much spare time I have) were written in my spare time and between work and getting an education. If I had done a more complete job they would have taken years to write and by the time I had completed the work updates in the outer world would have meant that the work would have meant that at least some of the content would have been out of date. Dare I say it, by the time that I have completed this report itself some of the content may have come to fruition as was the case with many of the technologies with the other documents? I very much see this document as a starting point rather than a complete reference for those who are interested in technology security. Note that the information contained in this document is not considered to be correct nor the only way in which to do things. It's a mere guide to how the way things are and how we can improve on them. Like my previous work, it should be considered a work in progress. Also, note that this document has gone through many revisions and drafts may have gone out over time. As such, there will be concepts that may have been picked up and adopted by some organisations while others may have simply broken cover while this document was being drafted and sent out for comment. It also has a more strategic/business slant when compared to the original document which was more technically orientated. No illicit activity (as far as I know and have researched) was conducted during the formulation of this particular document. All information was obtained only from publicly available resources and any information or concepts that are likely to be troubling has been redacted. Any relevant vulnerabilities or flaws that were found were reported to the relevant entities in question (months have passed). Feedback/credit on any ideas that are subsequently put into action based on the content of this document would be appreciated. Any feedback on the content of this document is welcome. Every attempt has been made to ensure that the instructions and information herein are accurate and reliable. Please send corrections, comments, suggestions and questions to the author. Use of a term in this document should not be regarded as affecting the validity of any trademark or service mark. The author would appreciate and consider it courteous if notification of any and all modifications, translations, and printed versions are sent to him. Please note that this is an organic document that will change as we learn more about this new computing paradigm. **Astro and Geography** **Ciro Discepolo,Andrea Rossetti,2011-10-10** Astrogeography probably represents, together with the Aimed Solar Returns and the Aimed Lunar Returns, the most objective and mathematically verifiable field of the entire Art of Urania. As with our other publications, in this short, yet exhaustive text also, we have adhered the following rule: an example is worth a thousand words. Here you'll find many examples; probably all of them can be defined remarkable ones. These examples show in practice how true and verifiable by anyone is Astrogeography, a discipline whose readability, a priori and a posteriori, leaves people almost bewildered by what might be called its 'scientific' features. Astrogeography - but this may as well refer to all of Astrology - expresses the basic concept upon which our studies rely: namely, that everything that is born takes on the characteristics of the place and the moment of its birth. Therefore, if we apply the variable space to all the components of Astrology, we are able to experience at first-hand how the real things change depending on their geographic latitude and longitude. In this text you can also find the evidence that Astrogeography was already known to Girolamo Cardano, an Italian Renaissance astrologer; in fact, it is probable that this field of astrological knowledge was known even centuries before him. This volume lists all the astrogeographical positions that may be of interest, together with their explanations. They help you detect the best places on Earth that you can move to and achieve a successful career, monetary gain, love, health, and so on... You will also find detailed explanations about the so-called parans, which are so important in World Astrology. This volume is an extensively revised edition of the earlier Italian publication. It has been co-written by me and Andrea Rossetti, one of the best Italian astrologers, who has a great passion for this subject and has contributed more than me to this work, which I hope will be successful in its English version also.

It presents a preliminary assessment of current biodiversity-related finance flows, and discusses the key data and indicator gaps that need to be addressed to underpin effective monitoring of both the pressures on biodiversity and the actions (i.e. responses) being implemented. The report concludes with ten priority areas where G7 and other countries can prioritise their efforts.
