Perihelia Reduction and Global Kolmogorov Tori in the Planetary Problem Gabriella Pinzari,2018-10-03 The author proves the existence of an almost full measure set of n -dimensional quasi-periodic motions in the planetary problem with masses, with eccentricities arbitrarily close to the Levi-Civita limiting value and relatively high inclinations. This extends previous results, where smallness of eccentricities and inclinations was assumed. The question had been previously considered by V. I. Arnold in the 1960s, for the particular case of the planar three-body problem, where, due to the limited number of degrees of freedom, it was enough to use the invariance of the system by the $SO(3)$ group. The proof exploits nice parity properties of a new set of coordinates for the planetary problem, which reduces completely the number of degrees of freedom for the system (in particular, its degeneracy due to rotations) and, moreover, is well fitted to its reflection invariance. It allows the explicit construction of an associated close to be integrable system, replacing Birkhoff normal form, a common tool of previous literature.

Encountering Aboriginal Languages William McGregor,2008 This edited volume represents the first book-length study of the history of research on Australian Aboriginal languages, and collects together 18 original papers on a wide variety of topics, spanning the period from first settlement to the present day. The introduction sets the scene for the book by presenting an overview of the history of histories of research on the languages of Australia , and identifying some of the major issues in Aboriginal linguistic historiography as well as directions for future investigations. Part 1 presents three detailed investigations of the history of work on particular languages and regions. The eight papers of Part 2 study and re-evaluate the contributions of particular individuals, most of who are somewhat marginal or have been marginalised in Aboriginal linguistics. Part 3 consists of six studies specific linguistic topics: sign language research, language revival, pidgins and creoles, fieldwork, Fr. Schmidt's work on personal pronouns, and the discovery that Australia was a multilingual continent. Overall, the volume presents two major challenges to Australianist orthodoxy. First, the papers challenge the typically anachronistic approaches to the history of Aboriginal linguistics, and reveal the need to examine previous research in the context of their times - and the advantages of doing so to contemporary understanding and language documentation. Second, the widespread presumption that the period 1910-1960 represented the 'dark ages' of Aboriginal linguistics, characterised by virtually no linguistic work, is refuted by a number of studies in the present volume.

The Politics of Carbon Markets Benjamin Stephan,Richard Lane,2014-08-27 The carbon markets are in the middle of a fundamental crisis - a crisis marked by collapsing prices, fleeing actors, and ever increasing greenhouse gas levels. Yet carbon trading remains at the heart of global attempts to respond to climate change. Not only this, but markets continue to proliferate - particularly in the Global South. The Politics of Carbon Markets helps to make sense of this paradox and brings two urgently needed insights to the analysis of carbon markets. First, the markets must be understood in relation to the politics involved in their development, maintenance and opposition. Second, this politics is multiform and pervasive. Implementation of new techniques and measuring tools, policy

development and contestation, and the structuring context of institutional settings and macro-social forces all involve a variety of political actors and create new forms of political agency. The contributions study the total extent of the carbon markets, from their prehistory to their contemporary expansion and wider impacts. This wide-ranging political perspective on the carbon markets is invaluable to those studying and interested in ecological markets, climate change governance and environmental politics.

Peace Operations and Human Rights Ray Murphy, Katarina Mansson, 2013-09-13 The protection and promotion of human rights is an integral part of contemporary international peacekeeping operations. It is also a controversial aspect of peace operations at both an institutional and operational level. By bringing together a wide range of practitioners and academic scholars, this special issue addresses key contemporary legal, political and operational challenges to human rights protection. This book was previously published as a special issue of the leading journal *International Peacekeeping*.

Quantum Transport Supriyo Datta, 2005-06-16 This book presents the conceptual framework underlying the atomistic theory of matter, emphasizing those aspects that relate to current flow. This includes some of the most advanced concepts of non-equilibrium quantum statistical mechanics. No prior acquaintance with quantum mechanics is assumed. Chapter 1 provides a description of quantum transport in elementary terms accessible to a beginner. The book then works its way from hydrogen to nanostructures, with extensive coverage of current flow. The final chapter summarizes the equations for quantum transport with illustrative examples showing how conductors evolve from the atomic to the ohmic regime as they get larger. Many numerical examples are used to provide concrete illustrations and the corresponding Matlab codes can be downloaded from the web. Videostreamed lectures, keyed to specific sections of the book, are also available through the web. This book is primarily aimed at senior and graduate students.
