The Diaries of Anthony Hewitson, Provincial Journalist, Volume 1 Andrew Hobbs,2022-09-26 Anthony Hewitson (1836-1912) was a typical Victorian journalist, working in one of the largest sectors of the periodical press, provincial newspapers. His diaries, written between 1862 and 1912, lift the veil of anonymity hiding the people, processes and networks involved in the creation of Victorian newspapers. They also tell us about Victorian fatherhood, family life, and the culture of a Victorian town. Diaries of nineteenth-century provincial journalists are extremely rare. Anthony Hewitson went from printer's apprentice to newspaper reporter and eventually editor of his own paper. Every night he jotted down the day's doings, his thoughts and feelings. The diaries are a lively account of the reporter's daily round, covering meetings and court cases, hunting for gossip or attending public executions and variety shows, in and around Preston, Lancashire. Andrew Hobbs's introduction and footnotes provide background and analysis of these valuable documents. This full scholarly edition offers a wealth of new information about reporting, freelancing, sub-editing, newspaper ownership and publishing, and illuminates aspects of Victorian periodicals and culture extending far beyond provincial newspapers. The Diaries of Anthony Hewitson, Provincial Journalist are an indispensable research tool for local and regional historians, as well as social and political historians with an interest in Victorian studies and the media. They are also illuminating for anyone interested in nineteenth-century social and cultural history.

European Foreign Policy and the Challenges of Balkan Accession Gergana Noutcheva,2012-07-26 The Balkan countries have responded differently to the EU's conditional offer of membership. This book examines the diverging compliance patterns of the Balkan accession states and asks why some of them have complied substantially, some only partially and others have defied the EU. The book examines the compliance of the Balkan states with the EU accession conditionality, arguing that the variation in the compliance behavior of Balkan governments hinges on three main factors – the legitimacy of the EU conditions as seen domestically in the accession states, the costs of compliance and the EU's ability and willingness to use its superior power resources to impose compliance when faced with domestic defiance. Placing important events from the most recent political history of the Balkans in a broader historical perspective, the author evaluates the successes and failures of the EU's state building policies in the Balkans, a geographical area of the highest priority for the EU's foreign policy and a test case for the EU's capacity and willingness for foreign policy action. Based on detailed empirical data, European Foreign Policy and the Challenges of Balkan Accession will be of interest to scholars and students of EU and comparative politics, and those focusing on policy impact in EU integration.

Walmart Bryan Roberts,Natalie Berg,2012-04-03 Walmart provides a detailed assessment of the world's largest retailer that forever changed the face of retailing. The book examines Walmart's successes, failures, and whether it can stay ahead for the next 50 years. Despite being a source for best practice in procurement, logistics, systems and store format innovation, the retail giant is now facing several issues that affect its future development. Starting from its inception in rural Arkansas in 1962, this objective analysis of Walmart's history addresses the rapid change of retail, including the rise of e-commerce and multi-channel retailing; Walmart International and its 'everyday low prices' philosophy; the saturation of the superstore format, and much more. In a time of rapid change, will the world's largest retailer be able to reconfigure? Walmart provides the necessary insights for retailers, advertisers, other business professionals and students to understand how Walmart became a retail giant, the lessons that can be learned, and what is in store for the future.

Logistics 4.0 Turan Paksoy,Cigdem Gonul Kochan,Sadia Samar Ali,2020-12-18 Industrial revolutions have impacted both, manufacturing and service. From the steam engine to digital automated production, the industrial revolutions have conduced significant changes in operations and supply chain management (SCM) processes. Swift changes in manufacturing and service systems have led to phenomenal improvements in productivity. The fast-paced environment brings new challenges and opportunities for the companies that are associated with the adaptation to the new concepts such as Internet of Things (IoT) and Cyber Physical Systems, artificial intelligence (AI), robotics, cyber security, data analytics, block chain and cloud technology. These emerging technologies facilitated and expedited the birth of Logistics 4.0. Industrial Revolution 4.0 initiatives in SCM has attracted stakeholders' attentions due to it is ability to empower using a set of technologies together that helps to execute more efficient production and distribution systems. This initiative has been called Logistics 4.0 of the fourth Industrial Revolution in SCM due to its high potential. Connecting entities, machines, physical items and enterprise resources to each other by using sensors, devices and the internet along the supply chains are the main attributes of Logistics 4.0. IoT enables customers to make more suitable and valuable decisions due to the data-driven structure of the Industry 4.0 paradigm. Besides that, the system's ability of gathering and analyzing information about the environment at any given time and adapting itself to the rapid changes add significant value to the SCM processes. In this peer-reviewed book, experts from all over the world, in the field present a conceptual framework for Logistics 4.0 and provide examples for usage of Industry 4.0 tools in SCM. This book is a work that will be beneficial for both practitioners and students and academicians, as it covers the theoretical framework, on the one hand, and includes examples of practice and real world.

Fairness in Academic Course Timetabling Moritz Mühlenthaler,2015-01-16 This monograph deals with theoretical and practical aspects of creating course timetables at academic institutions. The task is typically to create a timetable that suits the requirements of the stakeholders – students, lecturers, and the administration – as well as possible. The book presents an exposition of the basic combinatorial problems and solution methods for course timetabling and related tasks. It provides a rigorous treatment of fairness issues that arise in the course timetabling context and shows how to deal with the potentially conflicting interests of the stakeholders. The proposed methods are also readily applicable to other classes of scheduling problems such as staff rostering. Finally, it presents a comprehensive case study on the implementation of an automated course timetabling system at the school of engineering of the University of Erlangen-Nuremberg. The case study includes a detailed description of the problem model as well as an evaluation of stakeholder satisfaction.

Fostering Rapid Advances in Health Care Institute of Medicine,Board on Health Care Services,Committee on Rapid Advance Demonstration Projects: Health Care Finance and Delivery Systems,2002-12-19 In response to a request from the Secretary of the Department of Health and Human Services, the

Institute of Medicine convened a committee to identify possible demonstration projects that might be implemented in 2003, with the hope of yielding models for broader health system reform within a few years. The committee is recommending a substantial portfolio of demonstration projects, including chronic care and primary care demonstrations, information and communications technology infrastructure demonstrations, health insurance coverage demonstrations, and liability demonstrations. As a set, the demonstrations address key aspects of the health care delivery system and the financing and legal environment in which health care is provided. The launching of a carefully crafted set of demonstrations is viewed as a way to initiate a building block approach to health system change.

The book offers a compilation of peer-reviewed papers that uniquely connects knowledge broadly across practice and academia; from the newest technologies and methods such as the role of digital modelling, analysis, and fabrication in circular design, i.e. material passports, cyber-physical augmentation, and LCA to the potentials of growing and harvesting biomass materials, engaging waste streams in material production and more, all in context of economic, social, and ecological potentials and consequences. The book is part of a series of six volumes that explore the agency of the built environment in relation to the SDGs through new research conducted by leading researchers. In this first definitive guide to metal-organic framework chemistry, author L. MacGillivray addresses state-of-art developments in this promising technology for alternative fuels. Providing professors, graduate and undergraduate students, structural chemists, physical chemists, and chemical engineers with a historical perspective, as well as the most up-to-date developments by leading experts, Metal-Organic Frameworks examines structure, symmetry, supramolecular chemistry, surface engineering, metal-organometallic frameworks, properties, and reactions.

The Quadratic Assignment Problem E. Cela,2013-03-14 The quadratic assignment problem (QAP) was introduced in 1957 by Koopmans and Beckmann to model a plant location problem. Since then the QAP has been object of numerous investigations by mathematicians, computers scientists, ope- tions researchers and practitioners. Nowadays the QAP is widely considered as a classical combinatorial optimization problem which is (still) attractive from many points of view. In our opinion there are at last three main reasons which make the QAP a popular problem in combinatorial optimization. First, the number of re- life problems which are mathematically modeled by QAPs has been continuously increasing and the variety of the fields they belong to is astonishing. To recall just a restricted number among the applications of the QAP let us mention placement problems, scheduling, manufacturing, VLSI design, statistical data analysis, and parallel and distributed computing. Secondly, a number of other well known c- binatorial optimization problems can be formulated as QAPs. Typical examples are the traveling salesman problem and a large number of optimization problems in graphs such as the maximum clique problem, the graph partitioning problem and the minimum feedback arc set problem. Finally, from a computational point of view the QAP is a very difficult problem. The QAP is not only NP-hard and - hard to approximate, but it is also practically intractable: it is generally considered as impossible to solve (to optimality) QAP instances of size larger than 20 within reasonable time limits.
