The Washington Consensus Reconsidered Narcís Serra, Joseph E. Stiglitz, 2008-04-24 This volume brings together many of the leading international figures in development studies, such as Jose Antonio Ocampo, Paul Krugman, Dani Rodrik, Joseph Stiglitz, Daniel Cohen, Olivier Blanchard, Deepak Nayyar and John Williamson to reconsider and propose alternative development policies to the Washington Consensus. Covering a wide range of issues from macro-stabilization to trade and the future of global governance, this important volume makes a real contribution to this important and ongoing debate. The volume begins by introducing the Washington Consensus, discussing how it was originally formulated, what it left out, and how it was later interpreted, and sets the stage for a formulation of a new development framework in the post-Washington Consensus era. It then goes on to analyze and offer differing perspectives and potential solutions to a number of key development issues, some which were addressed by the Washington Consensus and others which were not. The volume concludes by looking toward formulating new policy frameworks and offers possible reforms to the current system of global governance.

**Agriculture Productivity in Tunisia Under Stressed Environment** Faiza Khebour Allouche, Mohamed Abu-hashim, Abdelazim M. Negm, 2021-05-18 This book highlights recent efforts to sustain agricultural productivity in Tunisia under a stressed environment and aridity conditions. This book's authors gathered a unique set of applications and approaches, including techniques applied to increase yield and preserve the environment, such as organic farming and using biochar amendment and its effects on soils' physicochemical properties. This book also presents water resources management and water management practices for sustainable soil production, diagnosis, and new farming technologies to enhance water-use efficiency. The book also addresses current livestock strategies intended to maintain production sustainability, increase fish productivity, and initiatives for sustainable tourism development. Given its scope, the book offers a valuable guide for policy planners, decision-makers, stakeholders, researchers, and graduate students in Tunisia and neighboring countries with similarly stressed environmental conditions.

Essentials of WTO Law Peter Van den Bossche, Denise Prévost, 2016-04-02 At a time when developments in WTO law have made this field increasingly complex, this concise and non-technical introduction provides a timely and carefully considered overview of the substantive rules and institutional arrangements of the WTO. A variety of text features enables a rich understanding of the law: illustrative examples clarify important issues of the law and demonstrate the law's practical application; boxed summaries of key rulings in WTO case law highlight the interpretation of the relevant provisions and lead readers to a deep understanding of the meaning and application of legal rules; and recommendations for further reading allow readers to engage with current debates. Online resources include links to useful sources of information for work and research within the field. Co-written by a leading authority in the field, this is essential reading for anyone who wants to get to grips with this fascinating yet challenging field of law.

Healthy China: Deepening Health Reform in China The World Bank; World Health Organization, 2019-04-04 The report recommends that China maintain the goal and direction of its healthcare reform, and continue the shift from its current hospital-centric model that rewards volume and sales, to one that is centered on primary care, focused on improving the quality of basic health services, and delivers high-quality, cost-effective health services. With 20 commissioned background studies, more than 30 case studies, visits to 21 provinces in China, the report proposes practical, concrete steps toward a value-based integrated service model of healthcare financing and delivery, including: 1) Creating a new model of people-centered quality integrated health care that strengthens primary care as the core of the health system. This new care model is organized around the health needs of individuals and families and is integrated with higher level care and social services. 2) Continuously improve health care quality, establish an effective coordination mechanism, and actively engage all stakeholders and professional bodies to oversee improvements in quality and performance. 3) Empowering patients with knowledge and understanding of health services, so that there is more trust in the system and patients are actively engaged in their healthcare decisions. 4) Reforming public hospitals, so that they focus on complicated cases and delegate routine care to primary-care providers. 5) Changing incentives for providers, so they are rewarded for good patient health outcomes instead of the number of medical procedures used or drugs sold. 6) Boosting the status of the health workforce, especially primary-care providers, so they are better paid and supported to ensure a competent health workforce aligned with the new delivery system. 7) Allowing qualified private health providers to deliver cost-effective services and compete on a level playing field with the public sector, with the right regulatory oversight, and 8) Prioritizing public investments according to the burden of disease, where people live, and the kind of care people need on a daily basis.

**Molecular Breeding of Forage Crops** German Spangenberg, 2013-04-17 Forage plant breeding has entered the genome era. This timely book reviews the latest advances in the development and application of molecular technologies which supplement conventional breeding efforts for our major forage crops. It describes the plethora of new technologies and tools now available for high-throughput gene discovery, genome-wide gene expression analysis, production of transgenic plants, genome analysis and marker-assisted selection as applied to forage plants. Detailed accounts are presented of current and future opportunities for innovative applications of these molecular tools and technologies in the identification, functional characterisation, and use of valuable genes in forage production systems and beyond. This book represents a valuable resource for plant breeders, geneticists, and molecular biologists, and will be of particular relevance to advanced undergraduates, postgraduates, and researchers with an interest in forage legumes and grasses.

**Air Navigation Law** Ruwantissa Abeyratne, 2012-03-05 The aviation community, in which the International Civil Aviation Organization (ICAO), the International Air Transport Association (IATA) and the Civil Air Navigation Services Organization (CANSO) play leading roles, is hard at work in bringing aviation into the 21st Century. In doing so, the United States and Europe have taken proactive steps forward in introducing modernization, particularly in moving towards more efficient air traffic management systems within NextGen and SESAR. Elsewhere, in the fields of personnel licensing, rules of the air, accident investigation and aeronautical charts and information, significant strides are being made in moving from mere regulation to implementation and assistance calculated to make all ICAO member States self sufficient in international civil aviation. However, these objectives can be achieved only if the aviation industry has a sustained understanding of the legal and regulatory principles applying to the various areas of air

navigation. This book provides that discussion. Some of the subjects discussed in this book are: sovereignty in airspace; flight information and air defence identification zones; rules of the air; personnel licensing; meteorological services; operations of aircraft; air traffic services; accident and incident investigation; aerodromes; efficiency aspects of aviation and environmental protection; aeronautical charts and information; the carriage of dangerous goods; and NextGen and SESAR . Except for NextGen and SESAR, these subjects form the titles of the Annexes to the Chicago Convention that particularly involve the rights and liabilities of the key players involved in air navigation.

**Petunia** Tom Gerats,Judy Strommer,2008-12-11 Petunia belongs to the family of the Solanaceae and as such is closely related to important crop species like tomato, potato, eggplant, pepper and tobacco. With around 35 species described it is one of the smaller genera and among those there are two groups of species that make up the majority of them: the purple flowered *P.integrifolia* group and the white flowered *P.axillaris* group. It is assumed that interspecific hybrids between members of these two groups have laid the foundation for the huge variation in cultivars as selected from the 1830's onwards. Petunia thus has been a commercially important ornamental since the early days of horticulture. Despite that, Petunia was in use as a research model only parsimoniously until the late fifties of the last century. By then seed companies started to fund academic research, initially with the main aim to develop new color varieties. Besides a moment of glory around 1980 (being elected a promising model system, just prior to the Arabidopsis boom), Petunia has long been a system in the shadow. Up to the early eighties no more than five groups developed classical and biochemical genetics, almost exclusively on flower color genes. Then from the early eighties onward, interest has slowly been growing and nowadays some 20-25 academic groups around the world are using Petunia as their main model system for a variety of research purposes, while a number of smaller and larger companies are developing further new varieties. At present the system is gaining credibility for a number of reasons, a very important one being that it is now generally realized that only comparative biology will reveal the real roots of evolutionary development of processes like pollination syndromes, floral development, scent emission, seed survival strategies and the like. As a system to work with, Petunia combines advantages from several other model species: it is easy to grow, sets abundant seeds, while self- and cross pollination is easy; its lifecycle is four months from seed to seed; plants can be grown very densely, in 1 cm<sup>2</sup> plugs and can be rescued easily upon flowering, which makes even huge selection plots easy to handle. Its flowers (and indeed leaves) are relatively large and thus obtaining biochemical samples is no problem. Moreover, transformation and regeneration from leaf disc or protoplast are long established and easy-to-perform procedures. On top of this easiness in culture, Petunia harbors an endogenous, very active transposable element system, which is being used to great advantage in both forward and reverse genetics screens. The virtues of Petunia as a model system have only partly been highlighted. In a first monograph, edited by K. Sink and published in 1984, the emphasis was mainly on taxonomy, morphology, classical and biochemical genetics, cytogenetics, physiology and a number of topical subjects. At that time, little molecular data was available. Taking into account that that first monograph will be offered electronically as a supplement in this upcoming edition, we would like to put the overall emphasis for the second edition on molecular developments and on comparative issues. To this end we propose the underneath set up, where chapters will be brief and topical. Each chapter will present the historical setting of its subject, the comparison with other systems (if available) and the unique progress as made in Petunia. We expect that the second edition of the Petunia monograph will draw a broad readership both in academia and industry and hope that it will contribute to a further expansion in research on this wonderful Solanaceae.

*Social Inequalities and Cancer* Manolis Kogevinas,1997 In both industrialized and less developed societies, cancer incidence and survival are related to socioeconomic factors. This fascinating volume, the first to examine the magnitude of these socioeconomic differences in relation to cancer, provides vital information for all those interested in public health. Cancer incidence and survival are related to socioeconomic status in both industrialized and less developed countries. These differences can be explained, in part, by known risk factors, particularly tobacco smoke, occupational exposures, reproductive behaviour, diet and biological agents. T.

*Molecular Plant Taxonomy* Pascale Besse,2014-01-11 Plant taxonomy is an ancient discipline facing new challenges with the current availability of a vast array of molecular approaches which allow reliable genealogy-based classifications. Although the primary focus of plant taxonomy is on the delimitation of species, molecular approaches also provide a better understanding of evolutionary processes, a particularly important issue for some taxonomic complex groups. *Molecular Plant Taxonomy: Methods and Protocols* describes laboratory protocols based on the use of nucleic acids and chromosomes for plant taxonomy, as well as guidelines for phylogenetic analysis of molecular data. Experts in the field also contribute review and application chapters that will encourage the reader to develop an integrative taxonomy approach, combining nucleic acid and cytogenetic data together with other crucial information (taxonomy, morphology, anatomy, ecology, reproductive biology, biogeography, paleobotany), which will help

not only to best circumvent species delimitation but also to resolve the evolutionary processes in play. Written in the successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and easily accessible, Molecular Plant Taxonomy: Methods and Protocols seeks to provide conceptual as well as technical guidelines to plant taxonomists and geneticists.

Rethinking Urban Risk and Resettlement in the Global South Garima Jain,Cassidy Johnson,Allan Lavell,2021-06-10 A study on urban risk and resettlement programs in the Global South in the era of climate change. Environmental changes impact everyone, but the burden is especially heavy upon the lives and livelihoods of the urban poor and those living in informal settlements. In an effort to reduce urban residents' exposure to climate change and natural disasters, resettlement programs are becoming widespread across the Global South. Yet, while resettlement may reduce a region's future climate-related disaster risk, it can also often increase poverty and vulnerability. This volume collates the findings from a research project that examined urban areas across the globe, including case studies from India, Uganda, Peru, Colombia, Mexico, Cambodia, and the Philippines. The book offers a unique approach to resettlement, providing an opportunity for urban planners to re-think how disaster risk management can better address the accumulation of urban risks in the era of climate change.
