Activation and Desensitization of Transducing Pathways T.M. Konijn,M.D. Houslay,P.J.M. van Haastert,2013-06-29 Activation by and desensitization to signals originating from the environment is common in all organisms, ranging from prokaryotes to higher eukaryotes. Recently, a number of novel mechanisms involved in activation and desensitization have been elucidated. The similarities of the molecular mechanisms of activation and desensitization in the various systems are striking. In the first book (1987) on this topic, the functional and structural similarities of the various mechanisms to attenuate the effect of an outward signal were emphasized. Justification to have a second book three years later is the explosive growth of information in the field. More components involved in signal transfer have been discovered and also that several more G-proteins appear to play a role during this process. The interest in signal attenuation concurs with these developments. The emphasis in this book is on the common signal transfer elements responsible for activation and desensitization in animals, plants and microorganisms.

Understanding Pain Fernando Cervero,2014-02-14 An expert explores the nature of pain: why it hurts and why some pain is good and some pain is bad. If you touch something hot, it hurts. You snatch your hand away from the hot thing immediately. Obviously. But what is really happening, biologically—and emotionally? In Understanding Pain, Fernando Cervero explores the mechanisms and the meaning of pain. You touch something hot and your brain triggers a reflex action that causes you to withdraw your hand, protecting you from injury. That kind of pain, Cervero explains, is actually good for us; it acts as an alarm that warns us of danger and keeps us away from harm. But, Cervero tells us, not all pain is good for you. There is another kind of pain that is more like a curse: chronic pain that is not related to injury. This is the kind of pain that fills pain clinics and makes life miserable. Cervero describes current research into the mysteries of chronic pain and efforts to develop more effective treatments. Cervero reminds us that pain is the most common reason for people to seek medical attention, but that it remains a biological enigma. It is protective, but not always. Its effects are not only sensory but also emotional. There is no way to measure it objectively, no test that comes back positive for pain; the only way a medical professional can gauge pain is by listening to the patient's description of it. The idea of pain as a test of character or a punishment to be borne is changing; prevention and treatment of pain are increasingly important to researchers, clinicians, and patients. Cervero's account brings us closer to understanding the meaning of pain.

The Adaptive Brain II Stephen Grossberg,2013-10-22 The Adaptive Brain, II: Vision, Speech, Language, and Motor Control focuses on a unified theoretical analysis and predictions of important psychological and neurological data that illustrate the development of a true theory of mind and brain. The publication first elaborates on the quantized geometry of visual space and neural dynamics of form perception. Discussions focus on reflectance rivalry and spatial frequency detection, figure-ground separation by filling-in barriers, and disinhibitory propagation of functional scaling from boundaries to interiors. The text then takes a look at neural dynamics of perceptual grouping and brightness perception. Topics include simulation of a parametric binocular brightness study, smoothly varying luminance contours versus steps of luminance change, macrocircuit of processing stages, paradoxical percepts as probes of adaptive processes, and analysis of the Beck theory of textural segmentation. The book examines the neural dynamics of speech and language coding and word recognition and recall, including automatic activation and limited-capacity attention, a macrocircuit for the self-

organization of recognition and recall, role of intra-list restructuring arid contextual associations, and temporal order information across item representations. The manuscript is a vital source of data for scientists and researchers interested in the development of a true theory of mind and brain.

Neural Networks for Pattern Recognition Albert Nigrin,1993 In a simple and accessible way it extends embedding field theory into areas of machine intelligence that have not been clearly dealt with before. Neural Networks for Pattern Recognition takes the pioneering work in artificial neural networks by Stephen Grossberg and his colleagues to a new level. In a simple and accessible way it extends embedding field theory into areas of machine intelligence that have not been clearly dealt with before. Following a tutorial of existing neural networks for pattern classification, Nigrin expands on these networks to present fundamentally new architectures that perform realtime pattern classification of embedded and synonymous patterns and that will aid in tasks such as vision, speech recognition, sensor fusion, and constraint satisfaction. Nigrin presents the new architectures in two stages. First he presents a network called Sonnet 1 that already achieves important properties such as the ability to learn and segment continuously varied input patterns in real time, to process patterns in a context sensitive fashion, and to learn new patterns without degrading existing categories. He then removes simplifications inherent in Sonnet 1 and introduces radically new architectures. These architectures have the power to classify patterns that may have similar meanings but that have different external appearances (synonyms). They also have been designed to represent patterns in a distributed fashion, both in short-term and long-term memory.

In Gods We Trust Scott Atran,2004-12-09 This ambitious, interdisciplinary book seeks to explain the origins of religion using our knowledge of the evolution of cognition. A cognitive anthropologist and psychologist, Scott Atran argues that religion is a by-product of human evolution just as the cognitive intervention, cultural selection, and historical survival of religion is an accommodation of certain existential and moral elements that have evolved in the human condition.

The Subject's Point of View Katalin Farkas,2010-08-19 Descartes's philosophy has had a considerable influence on the modern conception of the mind, but many think that this influence has been largely negative. The main project of The Subject's Point of View is to argue that discarding certain elements of the Cartesian conception would be much more difficult than critics seem to allow, since it is tied to our understanding of basic notions, including the criteria for what makes someone a person, or one of us. The crucial feature of the Cartesian view defended here is not dualism - which is not adopted - but internalism. Internalism is opposed to the widely accepted externalist thesis, which states that some mental features constitutively depend on certain features of our physical and social environment. In contrast, this book defends the minority internalist view, which holds that the mind is autonomous, and though it is obviously affected by the environment, this influence is merely contingent and does not delimit what is thinkable in principle. Defenders of the externalist view often present their theory as the most thoroughgoing criticism of the Cartesian conception of the mind; Katalin Farkas offers a defence of an uncompromising internalist Cartesian conception.

Boolean Circuit Rewiring Tak-Kei Lam,Wai-Chung Tang,Xing Wei,Yi Diao,David Yu-Liang Wu,2016-01-11 Demonstrates techniques which will allow rewiring rates ofover 95%, enabling adoption of deep sub-micron chips for industrialapplications Logic synthesis is an essential part of the modern digital ICdesign process in semi-conductor industry. This book discusses alogic synthesis technique called "rewiring" and itslatest technical advancement in term of rewirability. Rewiringtechnique has surfaced in academic research since 1993 and there iscurrently no book available on the market which systematically andcomprehensively discusses this rewiring technology. The authorscover logic transformation techniques with concentration onrewiring. For many decades, the effect of wiring on logicstructures has been ignored due to an ideal view of wires and theirnegligible role in the circuit performance. However intoday's semiconductor technology wiring is the major playerin circuit performance degeneration and logic synthesis engines canbe improved to deal with this through wire-based transformations.This book introduces the automatic test pattern generation(ATPG)-based rewiring

techniques, which are recently active in therealm of logic synthesis/verification of VLSI/SOC designs. Unique comprehensive coverage of semiconductor rewiringtechniques written by leading researchers in the field Provides complete coverage of rewiring from an introductory tointermediate level Rewiring is explained as a flexible technique for Boolean logicsynthesis, introducing the concept of Boolean circuittransformation and testing, with examples Readers can directly apply the described techniques toreal-world VLSI design issues Focuses on the automatic test pattern generation (ATPG) basedrewiring methods although some non-ATPG based rewiring methods suchas graph based alternative wiring (GBAW), and "set of pairsof functions to be distinguished" (SPFD) based rewiring arealso discussed A valuable resource for researchers and postgraduate students inVLSI and SoC design, as well as digital design engineers, EDAsoftware developers, and design automation experts that specializein the synthesis and optimization of logical circuits.
