*Advertising and Consumer Culture in China* Hongmei Li,2016-09-06 This book provides a comprehensive analysis of Chinese advertising as an industry, a discourse and profession in China's search for modernity and cultural globalization. It compares and contrasts the advertising practices of Chinese advertising agencies and foreign advertising agencies, and Chinese brands and foreign brands, with a particular focus on the newest digital advertising practices in the post WTO era. Based on extensive interviews, participant observation, and a critical analysis of secondary data, Li offers an engaging analysis of the transformation of Chinese advertising in the past three decades in Post-Mao China. Drawing upon theories of political economy, media, and cultural studies, her analysis offers most significant insights in advertising and consumer culture as well as the economic, social, political, and cultural transformations in China. The book is essential for students and scholars of communication, media, cultural studies and international business, and all those interested in cultural globalization and China.

Design for Emergence Yanna Vogiazou,2007 Design for Emergence investigates spontaneous, unpredictable uses of technology that are driven by social contexts and collaborative processes, based on our ability to communicate our presence, both virtual and physical, in symbolic ways. In light of the fact that social dynamics and unexpected uses of technology can inspire innovation, this book proposes a research model of design for emergence, focusing on emergent phenomena as part of an iterative design process. By providing playful, technology-mediated experiences with minimal structure, unpredictable user behaviours can emerge through exploration, resulting in a richer and more complex, social experience. The research methodology is practice-based; two interactive prototypes were designed, implemented and evaluated in different contexts: an online multiplayer BumperCar game and a wireless, location-based urban game of 'tag', called CitiTag. User studies showed that collaborative, spontaneous play can enhance the sense of social participation in a group activity.

Collective and individual behaviours and creative uses of technology emerged from a simply designed application based on symbolic presence, both in the virtual and the physical world. CitiTag experiments showed that virtual elements in a mixed reality game can instigate novel experiences in the context of our everyday physical and social environment, with often unexpected results. The observed emergent behaviours are personal and collective extensions of the virtual experience in the real world. The book concludes with a positive view of ubiquitous and social computing, in which the virtual world becomes a 'first class citizen' rather than a substitute for the real world, creating new situations and engaging experiences in the setting of our daily life that were not possible before.

**How to Survive a Pandemic** Michael Greger, M.D., FACLM, 2020-05-26 A vital, timely text on the viruses that cause pandemics and how to face them, by the New York Times bestselling author of *How Not to Die*. From tuberculosis to bird flu and HIV to coronavirus, these infectious diseases share a common origin story: human interaction with animals. Otherwise known as zoonotic diseases for their passage from animals to humans, these pathogens—both pre-existing ones and those newly identified—emerge and re-emerge throughout history, sparking epidemics and pandemics that have resulted in millions of deaths around the world. How did these diseases come about? And what—if anything—can we do to stop them and their fatal march into our countries, our homes, and our bodies? In *How to Survive a Pandemic*, Dr. Michael Greger, physician and internationally-recognized expert on public health issues, delves into the origins of some of the deadliest pathogens the world has ever seen. Tracing their evolution from the past until today, Dr. Greger spotlights emerging flu and coronaviruses as he examines where these pathogens originated, as well as the underlying conditions and significant human role that have exacerbated their lethal influence to large, and even global, levels. As the world grapples with the devastating impact of the novel coronavirus 2019, Dr. Greger reveals not only what we can do to protect ourselves and our loved ones during a pandemic, but also what human society must rectify to reduce the likelihood of even worse catastrophes in the future.

**Seed Money: Monsanto's Past and Our Food Future** Bartow J. Elmore, 2021-10-12 An authoritative and eye-opening history that examines how Monsanto came to have outsized influence over our food system. Monsanto, a St. Louis chemical firm that became the world's largest maker of genetically engineered seeds, merged with German pharma-biotech giant Bayer in 2018—but its Roundup Ready®

seeds, introduced twenty-five years ago, are still reshaping the farms that feed us. When researchers found trace amounts of the firm's blockbuster herbicide in breakfast cereal bowls, Monsanto faced public outcry. Award-winning historian Bartow J. Elmore shows how the Roundup story is just one of the troubling threads of Monsanto's past, many told here and woven together for the first time. A company employee sitting on potentially explosive information who weighs risking everything to tell his story. A town whose residents are urged to avoid their basements because Monsanto's radioactive waste laces their homes' foundations. Factory workers who peel off layers of their skin before accepting cash bonuses to continue dirty jobs. An executive wrestling with the ethics of selling a profitable product he knew was toxic. Incorporating global fieldwork, interviews with company employees, and untapped corporate and government records, Elmore traces Monsanto's astounding evolution from a scrappy chemical startup to a global agribusiness powerhouse. Monsanto used seed money derived from toxic products—including PCBs and Agent Orange—to build an agricultural empire, promising endless bounty through its genetically engineered technology. Skyrocketing sales of Monsanto's new Roundup Ready system stunned even those in the seed trade, who marveled at the influx of cash and lavish incentives into their sleepy sector. But as new data emerges about the Roundup system, and as Bayer faces a tide of lawsuits over Monsanto products past and present, Elmore's urgent history shows how our food future is still very much tethered to the company's chemical past.

Digital Contact Tracing for Pandemic Response Jeffrey P. Kahn, Johns Hopkins Project on Ethics and Governance of Digital Contact Tracing Technologies, 2020-05-29 As nations race to hone contact-tracing efforts, the world's experts consider strategies for maximum transparency and impact. As public health professionals around the world work tirelessly to respond to the COVID-19 pandemic, it is clear that traditional methods of contact tracing need to be augmented in order to help address a public health crisis of unprecedented scope. Innovators worldwide are racing to develop and implement novel public-facing technology solutions, including digital contact tracing technology. These technological products may aid public health surveillance and containment strategies for this pandemic and become part of the larger toolbox for future infectious outbreak prevention and control. As technology evolves in an effort to meet our current moment, Johns Hopkins Project on Ethics and Governance of Digital Contact Tracing Technologies—a rapid research and expert consensus group effort led by Dr. Jeffrey P. Kahn of the Johns Hopkins Berman Institute of Bioethics in collaboration with the university's Center for Health Security—carried out an in-depth analysis of the technology and the issues it raises. Drawing

on this analysis, they produced a report that includes detailed recommendations for technology companies, policymakers, institutions, employers, and the public. The project brings together perspectives from bioethics, health security, public health, technology development, engineering, public policy, and law to wrestle with the complex interactions of the many facets of the technology and its applications. This team of experts from Johns Hopkins University and other world-renowned institutions has crafted clear and detailed guidelines to help manage the creation, implementation, and application of digital contact tracing. Digital Contact Tracing for Pandemic Response is the essential resource for this fast-moving crisis.
