*The World Health Report 2006* World Health Organization, 2006-03-23 The 2006 World Health Report focuses on the chronic shortages of doctors, midwives, nurses and other health care support workers in the poorest countries of the world where they are most needed. This is particularly true in sub-Saharan Africa, which has only four in every hundred global health workers but has a quarter of the global burden of disease, and less than one per cent of the world's financial resources. Poor working conditions, high rates of attrition due to illness and migration, and education systems that are unable to pick up the slack reflect the depth of the challenges in these crisis countries. This report considers the challenges involved and sets out a 10-year action plan designed to tackle the crisis over the next ten years, by which countries can strengthen their health system by building their health workforces and institutional capacity with the support of global partners.

*Nondestructive Materials Characterization* Norbert G. H. Meyendorf, Peter B. Nagy, Stanislav I. Rokhlin, 2013-11-21 With an emphasis on aircraft materials, this book describes techniques for the material characterization to detect and quantify degradation processes such as corrosion and fatigue. It introduces readers to these techniques based on x-ray, ultrasonic, optical and thermal principles and demonstrates the potential of the techniques for a wide variety of applications concerning aircraft materials, especially aluminum and titanium alloys. The advantages and disadvantages of various techniques are evaluated.

**New Insights Into Retinal Degenerative Diseases** Robert E. Anderson, Matthew M. LaVail, Joe G. Hollyfield, 2001-12-31 Since 1984, we have organized satellite symposia on retinal degenerations that are held in conjunction with the biennial International Congress of Eye Research. The timing and location of our Retinal Degeneration Symposia have allowed scientists and clinicians from around the world to convene and present their exciting new findings. The symposia have been arranged to allow ample time for discussions and one-on-one interactions in a relaxed atmosphere, where international friendships and collaborations could be established. The IXth International Symposium on Retinal Degeneration was held on October 9-14, 2000 in Durango, Colorado and was attended by over 100 scientists from six continents. This book contains many of their presentations. Several events of note occurred at this meeting. First, thanks to the generous support of the Foundation Fighting Blindness, we were able to sponsor the travel of 11 young scientists from six countries. Most of them have contributed chapters to this volume. The response to the travel program was so overwhelming that we will make it regular feature of our meeting. This will allow other bright, young investigators to be introduced to the world experts who study retinal degenerations. Second, about 40% of the scientists who attended this meeting were there for the first time. We believe that this indicates a growing interest in retinal degeneration research and ensures that new talent will be attracted to this important area of investigation. The symposium received support from several organizations.

**Ensuring Quality Cancer Care** Institute of Medicine and National Research Council, Commission on Life Sciences, Institute of Medicine, National Cancer Policy Board, 1999-07-21 We all want to believe that when people get cancer, they will receive medical care of the highest quality. Even as new scientific breakthroughs are announced, though, many cancer patients may be getting the wrong care, too little care, or too much care, in the form of unnecessary procedures. How close is American medicine to the ideal of quality cancer care for every person with cancer? Ensuring Quality Cancer Care provides a comprehensive picture of how cancer care is delivered in our nation, from early detection to end-of-life issues. The National Cancer Policy Board defines quality care and recommends how to monitor, measure, and extend quality care to all people with cancer. Approaches to accountability in health care are reviewed. What keeps people from getting care? The book explains how lack of medical coverage, social and economic status, patient beliefs, physician decision-making, and other factors can stand between the patient and the best possible care. The board explores how cancer care is shaped by the current focus on evidence-based medicine, the widespread adoption of managed care, where services are provided, and who provides care. Specific shortfalls in the care of breast and prostate cancer are identified. A status report on health services research is included. Ensuring Quality Cancer Care offers wide-ranging data and information in clear context. As the baby boomers approach the years when most cancer occurs, this timely volume will be of special interest to health policy makers, public and private healthcare purchasers, medical professionals, patient advocates, researchers, and people with cancer.

*Molecular Biology and Biotechnology of Plant Organelles* Henry Daniell, Ph.D., Christine D. Chase, 2007-11-04 We have taught plant molecular biology and biotechnology at the undergraduate and graduate level for over 20 years. In the past few decades, the field of plant organelle molecular biology and biotechnology has made immense strides. From the green revolution to golden rice, plant organelles have revolutionized agriculture. Given the exponential growth in research, the problem of finding appropriate textbooks for courses in plant biotechnology and molecular biology has become a major challenge. After years of handing out photocopies of various journal articles and reviews scattered through out the print and electronic media, a serendipitous meeting occurred at the 2002 IATPC World Congress held in Orlando, Florida.

After my talk and evaluating several posters presented by investigators from my laboratory, Dr. Jacco Flipsen, Publishing Manager of Kluwer Publishers asked me whether I would consider editing a book on Plant Organelles. I accepted this challenge, after months of deliberations, primarily because I was unsuccessful in finding a text book in this area for many years. I signed the contract with Kluwer in March 2003 with a promise to deliver a camera-ready textbook on July 1, 2004. Given the short deadline and the complexity of the task, I quickly realized this task would need a co-editor. Dr. Christine Chase was the first scientist who came to my mind because of her expertise in plant mitochondria, and she readily agreed to work with me on this book.

**Human Viruses: Diseases, Treatments and Vaccines** Shamim I. Ahmad, 2021-05-19 This book discusses current evidence on human viruses and provides an extensive coverage of newly emerged viruses and current strategies for treatment. Offering a new perspective in view of the re-emergence of Ebola in African countries and Dengue in India and Pakistan, the contents include chapters on emergence, pathogenicity, epidemiology and vaccine uptake. Human Viruses: Diseases, Treatments and Vaccines: The New Insights discusses a range of viruses from the most common such as Influenza and Hepatitis to Zika, Poliomyelitis and Chikungunya among many others. It is authored by a team of experts on viral disease and will be of immense use to virologists, public health experts and clinicians.

**Recent Developments in Forward Osmosis Processes** Rodrigo Valladares Linares, Zhenyu Li, Menachem Elimelech, Gary Amy, Hans Vrouwenvelder, 2017-05-15 Forward osmosis (FO) is an emerging membrane technology with a range of possible water treatment applications (desalination and wastewater treatment and recovery). Recent Developments in Forward Osmosis Processes provides an overview of applications, advantages, challenges, costs and current knowledge gaps. Commercial technology, hybrid FO systems for both desalination and water recovery applications have shown to have higher capital cost compared to conventional technologies. Nevertheless, due to the demonstrated lower operational costs of hybrid FO systems, the unit cost for each m3 of fresh water produced with the FO system are lower than conventional desalination/water recovery technologies (i.e. ultrafiltration/RO systems). There are key benefits of using FO hybrid systems compared to RO: • chemical storage and feed systems may be reduced for capital, operational and maintenance cost savings, • reduced process piping costs, • more flexible treatment units, • higher overall sustainability of the desalination process, while producing high quality water.

**The Immune Response to Implanted Materials and Devices** Bruna Corradetti, 2016-11-30 This book provides a comprehensive overview of the cascade of events activated in the body following the implant of biomaterials and devices. It is one of the first books to shed light on the role of the host immune response on therapeutic efficacy, and reviews the state-of-the-art for both basic science and medical applications. The text examines advantages and disadvantages of the use of synthetic versus natural biomaterials. Particular emphasis is placed on the role of biomimicry in the development of smart strategies able to modulate infiltrating immune cells, thus reducing side effects (such as acute and chronic inflammation, fibrosis and/or implant rejection) and improving the therapeutic outcome (healing, tissue restoration). Current cutting-edge approaches in tissue engineering, regenerative medicine, and nanomedicine offer the latest insights into the role immunomodulation in improving tolerance during tissue transplant in the treatment of orthopaedic, pancreatic, and hepatic diseases. Immune Response to Implanted Materials and Devices is intended for an audience of graduate students and professional researchers in both academia and industry interested in the development of smart strategies, which are able to exploit the self-healing properties of the body and achieve functional tissue restoration.

**Networked Control Systems** Alberto Bemporad, Maurice Heemels, Mikael Vejdemo-Johansson, 2010-10-14 This book finds its origin in the WIDE PhD School on Networked Control Systems, which we organized in July 2009 in Siena, Italy. Having gathered experts on all the aspects of networked control systems, it was a small step to go from the summer school to the book, certainly given the enthusiasm of the lecturers at the school. We felt that a book collecting overview on the important developments and open problems in the field of networked control systems could stimulate and support future research in this appealing area. Given the tremendous current interests in distributed control exploiting wired and wireless communication networks, the time seemed to be right for the book that lies now in front of you. The goal of the book is to set out the core techniques and tools that are available for the modeling, analysis and design of networked control systems. Roughly speaking, the book consists of three parts. The first part presents architectures for distributed control systems and models of wired and wireless communication networks. In particular, in the first chapter important technological and architectural aspects on distributed control systems are discussed. The second chapter provides insight in the behavior of communication channels in terms of delays, packet loss and information constraints leading to suitable modeling paradigms for communication networks.

**MicroComputed Tomography** Stuart R. Stock, 2018-10-03 Due to the availability of commercial laboratory systems and the emergence of user facilities at synchrotron radiation sources, studies of microcomputed tomography or microCT have increased exponentially. MicroComputed Technology provides a complete introduction to the technology, describing how to use it effectively and understand its results. The first part of the book focuses on methodology, covering experimental methods, data analysis, and visualization approaches. The second part addresses various microCT applications, including porous solids, microstructural evolution, soft tissue studies, multimode studies, and indirect analyses. The author presents a sufficient amount of fundamental material so that those new to the field can develop a relative understanding of how to design their own microCT studies. One of the first full-length references dedicated to microCT, this book provides an accessible introduction to field, supplemented with application examples and color images.

**Bioenergy Production by Anaerobic Digestion** Nicholas Korres, Pdraig O'Kiely, John A.H. Benzie, Jonathan S. West, 2013-08-29 Interest in anaerobic digestion (AD), the process of energy production through the production of biogas, has increased rapidly in recent years. Agricultural and other organic waste are important substrates that can be treated by AD. This book is one of the first to provide a broad introduction to anaerobic digestion and its potential to turn agricultural crops or crop residues, animal and other organic waste, into biomethane. The substrates used can include any non-woody materials, including grass and maize silage, seaweeds, municipal and industrial wastes. These are all systematically reviewed in terms of their suitability from a biological, technical and economic perspective. In the past the technical competence and high capital investment required for industrial-scale anaerobic digesters has limited their uptake, but the authors show that recent

advances have made smaller-scale systems more viable through a greater understanding of optimising bacterial metabolism and productivity. Broader issues such as life cycle assessment and energy policies to promote AD are also discussed.
